

Comodo EV – Extended Validation

Comodo EV or Extended Validation certificate, delivered by one of the SSL certification worldwide leader, is a must-have protection against phishing attacks. This SHA256-signed certificate also benefits from a great browser recognition and activates the green URL bar on most browsers.

Comodo EV is compatible with any kind of web server and, as any Comodo server certificate, can be installed on an unlimited number of servers.

trust booster

TBS INTERNET was founded in 1996 by IT security specialists to help companies comply with encryption best practices. Customers include leading companies, value-added resellers and public sectors.

Since the early days, TBS INTERNET offered a highly professional service issuing as well as installing digital certificates for its clients. As Internet usage grew and companies began to require specialized online security, it was the first to create a multi-brand digital certificate platform, securing platinum partnerships with major SSL providers.

Thanks to its own certification authority "TBS X509" the company can provide competitive authenticated certificates very well supported in browsers.

COMODO Certification Authority

Comodo CA has become one of the world's leading corporations when it comes to Internet security over the years.

Innovative in nature, Comodo CA provides a wide range of security products for both organisations and individuals.

the trust seal
