

Comodo EV Multiple Sites (3+)

With Comodo multiple sites certificates you'll be able, unlike standards certificates, to secure several different domains / sites names with a single certificate.

It also activates the green URL bar on most browsers and is signed in SHA256.

This complete certificate combines high security level, multiple securing and instant visual recognition.

trust booster

TBS INTERNET was founded in 1996 by IT security specialists to help companies comply with encryption best practices. Customers include leading companies, value-added resellers and public sectors.

Since the early days, TBS INTERNET offered a highly professional service issuing as well as installing digital certificates for its clients. As Internet usage grew and companies began to require specialized online security, it was the first to create a multi-brand digital certificate platform, securing platinum partnerships with major SSL providers.

Thanks to its own certification authority "TBS X509" the company can provide competitive authenticated certificates very well supported in browsers.
