

Comodo MultiWild (2+)

Buying and installing an SSL certificate for each one of your sub-domains can easily become complicated and expensive.

Comodo MultiWild certificates can secure several sites names such as *.domain.com or *.sub-domain.domain.com.

The Comodo MultiWild certificate is able to secure 2 sites names (SANs) in its basic version and can host up-to 20 wildcard SANs.

trust booster

TBS INTERNET was founded in 1996 by IT security specialists to help companies comply with encryption best practices. Customers include leading companies, value-added resellers and public sectors.

Since the early days, TBS INTERNET offered a highly professional service issuing as well as installing digital certificates for its clients. As Internet usage grew and companies began to require specialized online security, it was the first to create a multi-brand digital certificate platform, securing platinum partnerships with major SSL providers.

Thanks to its own certification authority "TBS X509" the company can provide competitive authenticated certificates very well supported in browsers.

COMODO

Certification Authority

Comodo CA has become one of the world's leading corporations when it comes to Internet security over the years.

Innovative in nature, Comodo CA provides a wide range of security products for both organisations and individuals.

the trust seal
