Comodo UCC – Unified Communication Certificate

The Comodo Unified Communication Certificate is a multi-domain product recommended by Microsoft for its Exchange products (since version 2007) that allows to secure several Exchange services names or to gather the security of different domains / sites name on a single certificate.

The Comodo UCC range comes with 3 or 12 SANs and is ideal to secure your corporate mail gateway.

trust booster

TBS INTERNET was founded in 1996 by IT security specialists to help companies comply with encryption best practices. Customers include leading companies, value-added resellers and public sectors.

Since the early days, TBS INTERNET offered a highly professional service issuing as well as installing digital certificates for its clients. As Internet usage grew and companies began to require specialized online security, it was the first to create a multi-brand digital certificate platform, securing platinum partnerships with major SSL providers.

Thanks to it's own certification authority "TBS X509" the company can provide competitive authenticated certificates very well supported in browsers.
