

Buying and installing an SSL certificate for each one of your sub-domains can easily become complicated and expensive.

The Comodo Wildcard (or omnidomain) certificate can secure an entire level of sub-domains matching the form \*.domain.com.

Centralize and facilitate the securing of all your sub-domains with the help of the Comodo WildSSL certificates.

### *trust booster*

TBS INTERNET was founded in 1996 by IT security specialists to help companies comply with encryption best practices. Customers include leading companies, value-added resellers and public sectors.

Since the early days, TBS INTERNET offered a highly professional service issuing as well as installing digital certificates for its clients. As Internet usage grew and companies began to require specialized online security, it was the first to create a multi-brand digital certificate platform, securing platinum partnerships with major SSL providers.

Thanks to its own certification authority "TBS X509" the company can provide competitive authenticated certificates very well supported in browsers.
